

A. The Merging Path Plot panel
Shows the hierarchical structure of similarity between groups.
Stars present how significant are differences between two clusters.
Horizontal position of the join corresponds to the likelihood of the combined model.

C. The GIC panel
Shows the Generalized Information Criterion for all models in the MPP panel. Default penalty=2 corresponds to the AIC criterion.
Colours in the MPP panel correspond to the optimal model.

B. The response panel
Shows graphical summaries for initial groups.
Use the responsePanel1 argument to select the desired summary

D. The summary panel
Shows the p-value for global hypothesis that parameter of interest is equal in all groups, the initial number of groups and the number of observations.
